

Data Center Health Check

Are you under-cooled, over-cooled, or just right?
Do you have enough available power to handle growth?
What is causing hot spots and how can they be cured?
Is your data center "healthy" enough to bring in new technology?

Our comprehensive assessment of your Data Center Infrastructure documents current and potential issues while providing practical recommendations.

- Rack-level power, cooling, and rack management analysis
- Best Practices analysis on data center layout and design
- Thermal load and airflow analysis
- Environmental monitoring, alerting and device management analysis
- Best Practices recommendations for data servers and virtualized server power and management
- Incorporate your existing infrastructure into our environmental analysis

Computational Fluid Dynamics (CFD) Study

CFD studies can be incorporated into our Health Checks to provide complete thermal and airflow modeling. The easy-to-use data presentation enables proper benchmarking and growth planning. With a CFD Study you see the value of recommendations prior to implementation.

- Above floor thermal load analysis (2-axis based analysis)
- Above and below floor airflow pattern analysis
- Detailed CRAC Micro analysis
- Annual update services as the data center grows / changes

Able Group Technologies
1001 FIVE STAR BOULEVARD, SUITE 1000
PHOENIX, AZ 85028

One Stop Shop

As a one-stop shop, Able can provide an integrated solution involving technologies from one or more vendors, as well as a single point of contact for both deployment and problem resolution. We also have access to specialty products, as well as difficult to find and discontinued products. And our service extends to printer and hardware repair in addition to hardware and software installation.

By empowering our clients to succeed in an increasingly technological environment, we've developed a roster of long-term customers and a reputation for excellence.
